

Dashlane Nudges: Building a security-conscious workforce, one nudge at a time

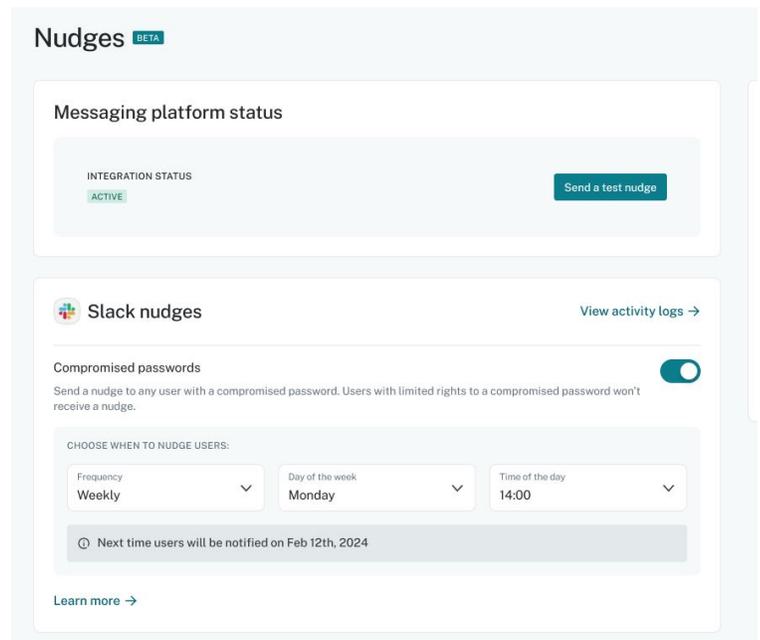

A proactive approach to security

Dashlane offers comprehensive credential management and security tools for organizations of all sizes. With Dashlane Nudges, IT admins can proactively communicate security risks and prompt employees to secure their at-risk credentials.

How it works: If a member has one or more compromised passwords, Dashlane automatically sends a Slack message encouraging the employee to create more secure & unique passwords.

Benefits:

- **Automated nudge:** Leverage the power of automation to improve your organization's security posture.
- **Security risk awareness:** Communicate credential risks through the Slack messaging app.
- **Call-to-action:** Inform employees about compromised passwords, nudge them to take action & update their passwords.

Empower employees to make smarter security decisions

To use Slack Nudges in Dashlane, you'll add the Dashlane app to your organization's Slack workspace and then turn on Slack Nudges in the Dashlane Admin Console.

Find out more about how to set up Dashlane Nudges [here](#).
